FitHer

Technical Audit

Every item below is based on confirmed evidence from the screenshots and the APK inspection we ran.

1. TECHNICAL / BUILD ISSUES

#	Issue	Description
1	570 MB APK size	Confirmed on disk. 85% of it is native code (lib/ folder = 482.88 MB).
2	Three CPU architectures bundled	arm64-v8a (295 MB) + armeabi-v7a (186 MB) + x86_64 (0.94 MB). armeabi-v7a is largely redundant in 2026.
3	Zoom Video SDK duplicated	libviper.so, libzVideoApp.so, libzoombase_shared.so and other Zoom libraries ship in both arm64 and armeabi. ~300 MB of duplication.
4	96 locales declared	resources.arsc is 19.46 MB. Normal apps ship 1–3 MB. Most locales are unused.
5	16 DEX files (~102 MB)	Abnormally high. Suggests R8 minification is disabled or not configured.
6	All density buckets bundled	120 / 160 / 240 / 320 / 480 / 640 / 65534 / 65535 — images duplicated across all.
7	Universal APK, not AAB	Play Store is delivering a universal APK, not an App Bundle. No per-device optimization.

2. SECURITY / PRIVACY ISSUES

#	Issue	Description
8	Zebra/EMDK enterprise permissions	com.zebra.provider.READ, com.symbol.emdk.permission.EMDK, uses-library: com.symbol.emdk. Industrial barcode scanner SDK — not relevant to a fitness app.
9	Three CPU architectures bundled	arm64-v8a (295 MB) + armeabi-v7a (186 MB) + x86_64 (0.94 MB). armeabi-v7a is largely redundant in 2026.
10	CALL_PHONE permission	App can place calls without user confirmation.
11	SYSTEM_ALERT_WINDOW permission	App can draw over other apps historically a malware vector.
12	FOREGROUND_SERVICE_MEDIA_PROJECTION	Screen recording capability. Only justified if Zoom screen share is actively used.

13	READ_PHONE_STATE permission	Reads IMEI, phone number, and carrier.
14	Advertising SDKs present	AD_ID + four ACCESS_ADSERVICES_* permissions. Privacy concern for a health app.
15	No visible privacy disclosure	Health data (cycle, mood, weight, symptoms) is collected. No privacy messaging observed in the UI.
16	Admin login exposed publicly	"Login as Team / Admin" sits on the public sign-in screen.

3. PAYMENT / REVENUE-CRITICAL ISSUES

#	Issue	Description
17	Payment slip camera bug (CONFIRMED)	Camera does not open; error toast "Please select an image first!" appears while the picker is still open. Users cannot complete manual payment.
18	No free trial	No trial mechanism visible on any plan. High commitment barrier.
19	No refund / cancellation terms on plan page	Users see price but no refund or cancellation policy before Subscribe.
20	Manual payment delay	Slip uploads are "verified within a few hours" non-instant activation path
21	Two plans identical at PKR 3,700	Aasma and Irum plans have the same price and near-identical features. No differentiation.
22	"Workout Plan only" lists "customized diet plan"	Contradicts its own title. Copy error on the plan card.
23	No savings framing on longer durations	No discount messaging on 60/90/180-day tabs.
24	No social proof at paywall	No testimonials, ratings, or expert credentials shown on any plan screen.

4. FUNCTIONAL / FLOW ISSUES

#	Issue	Description
25	Missed session sheet has no CTA	No "Reschedule," "Join next," or "Find similar" action. Just informational.
26	Stale session content risk	Missed session detail showed 03:00 AM class after the user opened the 11:00 AM slot.
27	Community is empty	Cold-start problem. No visible moderation controls.

	on both feed and replies	
28	Freeze plan has no win-back flow	Freeze exists on Profile but no observed reactivation sequence.
29	No visible referral mechanism	No share/invite flow observed anywhere.
30	AI cold-start is 14 days	"Personalised patterns arrive after 14 days of check-ins." Delays value.
